PROFILE

Product designer for AI products. I design the screens people use and the way agents behave behind them: decision flows, conversation, states and the rules an agent follows. I own work end to end, from framing the problem with data to interaction and visual design, design QA and shipping the fix. I keep design systems the whole team builds from, and work in agentic workflows that automate the repetitive parts of design and delivery.

EXPERIENCE

Treescribe by Query Law · Product Designer · remote — Dec 2025 to now

An AI product that drafts legal agreements through a guided chat. I own the design of the chat, the decision interfaces, onboarding and the document view.

- **Decision trees:** designed how hundreds of linked legal decisions nest, expand and get answered; explored dozens of variants in Figma (accordion against inline tree, node states, icons, typefaces) and wrote prototypes and state specs for the control panel across every section of an agreement.
- **Agent behaviour:** designed what the AI agent asks, when it suggests an answer, how it moves between tasks and how it reports progress; wrote the voice rules it follows and chat test cases that pin its behaviour.
- **AI chat:** audited the chat for first-time users (24 findings on 15 screens, 4 critical), redesigned its hierarchy and spacing, ran design QA on the built product and shipped the fixes, including a progress strip for a document's stages.
- **Onboarding and data:** designed onboarding through five versions from sign-up to a signed agreement, cut it into shippable tasks, built a six-step funnel view with cohorts, and presented the first analytics dashboard to the team.
- **Design system and brand:** wrote the document view's style guide with Figma-checked tokens and approve changes to it; designed the product's components, moved status badges to semantic tokens, and designed the brand mark and a nine-chapter brand book.
- **Agentic workflow:** set up a workflow where agents carry designs from canvas to Figma to versioned exports and code; built reusable agent skills for design review, product proposals and team writing; run several agents in parallel.

Kara Digital Marketing · UI/UX Designer — Sep 2024 to Mar 2025

- Led responsive redesigns for several client websites, from wireframes to high-fidelity prototypes in Figma.
- Ran cross-functional workshops to agree problem framing, KPIs and UX scope; documented flows, edge states and acceptance criteria.
- Produced componentised UI with tokens, variants and Dev Mode specs for engineering handoff.

Bazimoon · Content Manager and Graphic Designer — Sep 2023 to Feb 2024

- Planned and produced social content end to end (photography, video, posters, catalogues) on a content calendar I set up.

Safir Digital Marketing · Graphic Designer — Mar 2023 to Apr 2023

- Designed campaign visuals, posts and stories, consistent with each client's brand.

EARLIER PROJECTS

- **iLearn**, tech-course store (2025): responsive UI and a tokenised design system; simpler path from discovery to checkout, with empty, error and loading states.
- **UniMind**, student mental-health app (2025): research, personas, journeys, IA and an accessible, RTL-ready interface.
- **AlfaTeb and Tavanbakhsh**, healthcare websites (2024): information architecture, trust patterns and annotated developer-ready files.

SKILLS AND TOOLS

Product: problem framing, decision flows, agent behaviour, success metrics, funnels, usability testing, A/B test design

Design: interaction and visual design, design systems and tokens, prototyping, UX writing, accessibility (WCAG AA)

Build: AI coding agents, React, Next.js, Tailwind CSS, HTML, CSS, Git and GitHub

Tools: Claude Design, Figma, FigJam, Framer, Adobe CC, GA4, Tag Manager, Clarity, Maze, UXTweak

EDUCATION

B.Sc. Multimedia, Kharazmi University, Tehran · 2021 to now

UX Design (Jul 2025) and UI Design (Sep 2025) certificates, Melina Design School
