PROFILE

Product manager and designer who brings business, marketing, design and product together. I started in graphic design, social media management and content creation, hold a bachelor's in multimedia from Kharazmi University, and am studying for a master's in business design at the University of Tehran. I build digital products that feel simple and human: mobile apps, websites, design systems, and AI products with the agents inside them. I own work end to end, from framing the problem and scoping it to design, launch and what the numbers say after. I work in agentic workflows that automate the repetitive parts of design and delivery.

EXPERIENCE

Treescribe · Product Designer → Product Manager · remote — Dec 2025 to now

Joined as product designer and moved into product management of an AI product, across product, design, brand and launch. The product is pre-launch, so I walk through the work in conversation.

- **Product management:** scope features with the founder and engineers, from the problem to shippable tasks, and set the measures that show whether each one worked.
- **AI and agent experiences:** design how the product's AI agents work with people: conversation, guidance, states and handoffs between tasks.
- **Product design:** core interfaces and onboarding, explored in many iterations in Figma and prototypes, with state specs for engineering.
- **Design system, brand and launch:** foundations, components and documentation the team builds from; the product's logo, brand guidelines and launch pages.
- **Quality and analytics:** design QA on the built product, usability reviews, and the onboarding and marketing analytics the team reads.
- **Agentic workflows:** work with AI agents that carry designs from Figma into production, and build the automations that speed up the team.

Kara Digital Marketing · UI/UX Designer — Sep 2024 to Mar 2025

- Led responsive redesigns for several client websites, from wireframes to high-fidelity prototypes in Figma.
- Ran cross-functional workshops to agree problem framing, KPIs and UX scope; documented flows, edge states and acceptance criteria.
- Produced componentised UI with tokens, variants and Dev Mode specs for engineering handoff.

Bazimoon · Content Manager and Graphic Designer — Sep 2023 to Feb 2024

- Planned and produced social content end to end (photography, video, posters, catalogues) on a content calendar I set up.

Safir Digital Marketing · Graphic Designer — Mar 2023 to Apr 2023

- Designed campaign visuals, posts and stories, consistent with each client's brand.

EARLIER PROJECTS

- **iLearn**, tech-course store (2025): responsive UI and a tokenised design system; simpler path from discovery to checkout, with empty, error and loading states.
- **UniMind**, student mental-health app (2025): research, personas, journeys, IA and an accessible, RTL-ready interface.
- **AlfaTeb and Tavanbakhsh**, healthcare websites (2024): information architecture, trust patterns and annotated developer-ready files.

SKILLS AND TOOLS

Product: product strategy, problem framing, scoping and prioritisation, success metrics, funnels, usability testing, A/B test design

Design: interaction and visual design, design systems and tokens, prototyping, UX writing, accessibility (WCAG AA)

Build: AI coding agents, React, Next.js, Tailwind CSS, HTML, CSS, Git and GitHub

Tools: Claude Design, Figma, FigJam, Framer, Adobe CC, GA4, Tag Manager, Clarity, Maze, UXTweak

EDUCATION

Master's in Business Design, University of Tehran · studying now
B.Sc. Multimedia, Kharazmi University, Tehran · from 2021
UX Design (Jul 2025) and UI Design (Sep 2025) certificates, Melina Design School
